

Operating a Global Grid

Lessons learnt from EGEE/LCG

Fabio Hernandez

Grid Computing Team Leader

IN2P3 Computing Centre

Lyon (France)

fabio@in2p3.fr

CNES Workshop on Grid Utilization
Toulouse, October 20th 2005

Contents

- Who we are
 - Overview of global grid projects: EGEE and LCG
 - Global grid operations issues
 - LCG/EGEE ways of solving them
 - Future work
 - Questions
- 

- **IN2P3: National Institute of Nuclear Physics and Particle Physics**
 - An institute of the National Centre for Scientific Research (CNRS)
- **Mission: promote and federate research in physics**
 - goal: identify elementary constituents of matter, their interactions and their behavior
- 3300+ people of whom 1700+ permanent scientists
- 18 laboratories
- 1 computing centre in Lyon

IN2P3 Computing Centre

- Data processing facility, not located in an experimental site
- Mission
 - mass storage repository
 - high-throughput computing facilities
 - network services for the whole institute
 - consulting and training services for laboratories
 - web hosting, video-conferencing, e-mail infrastructure, news, ...
 - 24x7 service
- Users
 - 1800+ users from IN2P3 and DSM-CEA (Atomic Energy Commission)
 - 35+ international collaborations in nuclear physics, particle physics and astrophysics
 - since 2002 serving also bio-medical applications
- Human resources
 - 60 people

IN2P3 Computing Centre (cont.)

IN2P3 Computing Centre (cont.)

- **Compute services**
 - 1.3M SpecInt2000 (~1200 CPUs)
 - Linux (most), AIX, SunOS
 - 1800+ simultaneous jobs
 - 15.000+ jobs in queue
 - **Data storage: disk**
 - ~250 TB
 - Not including local disk of compute nodes
 - **Data storage: tape**
 - Main scientific data storage medium
 - 36.000 cartridges on-line (6 silos StorageTek automated tape library)
 - mixture of 20GB and 200 GB cartridges
 - ◆ 1000+ TB
 - 150.000 cartridges in the vault
- 

IN2P3 Computing Centre (cont.)

- Involved in grid projects since 2000
 - Regional, national and international level
 - Applications in physics and bio-medical
- Gained great experience with EU DataGRID
- Now actively contributing to LCG and EGEE

LCG: LHC Computing Grid

- **LHC Computing Grid Goal:** to setup the global infrastructure for simulation and processing of data for the LHC (Large Hadron Collider) experiments
 - Prepare, deploy and operate the computing environment for experiments to analyze the data from the LHC detectors
 - Data acquisition starts on 2007
- **Strategy**
 - Integrate thousands of computers at dozens of participating institutes worldwide into a global computing resource
 - Rely on software being developed in advanced grid technology projects, both in Europe and in the USA
- **Global needs**
 - 37 PB/year (disk)
 - 43 PB/year (mass storage)
 - 105 M SpecInt2000
 - ◆ ~70.000 today's fastest CPUs
- **LCG : A data handling problem**
 - 40 millions collisions per second
 - After filtering ~100 collisions per second
 - 1 to 10 MB of digitised data per collision
 - ◆ Data rate: 0.1 to 1 GB/sec
 - 10^{10} recorded collisions per year

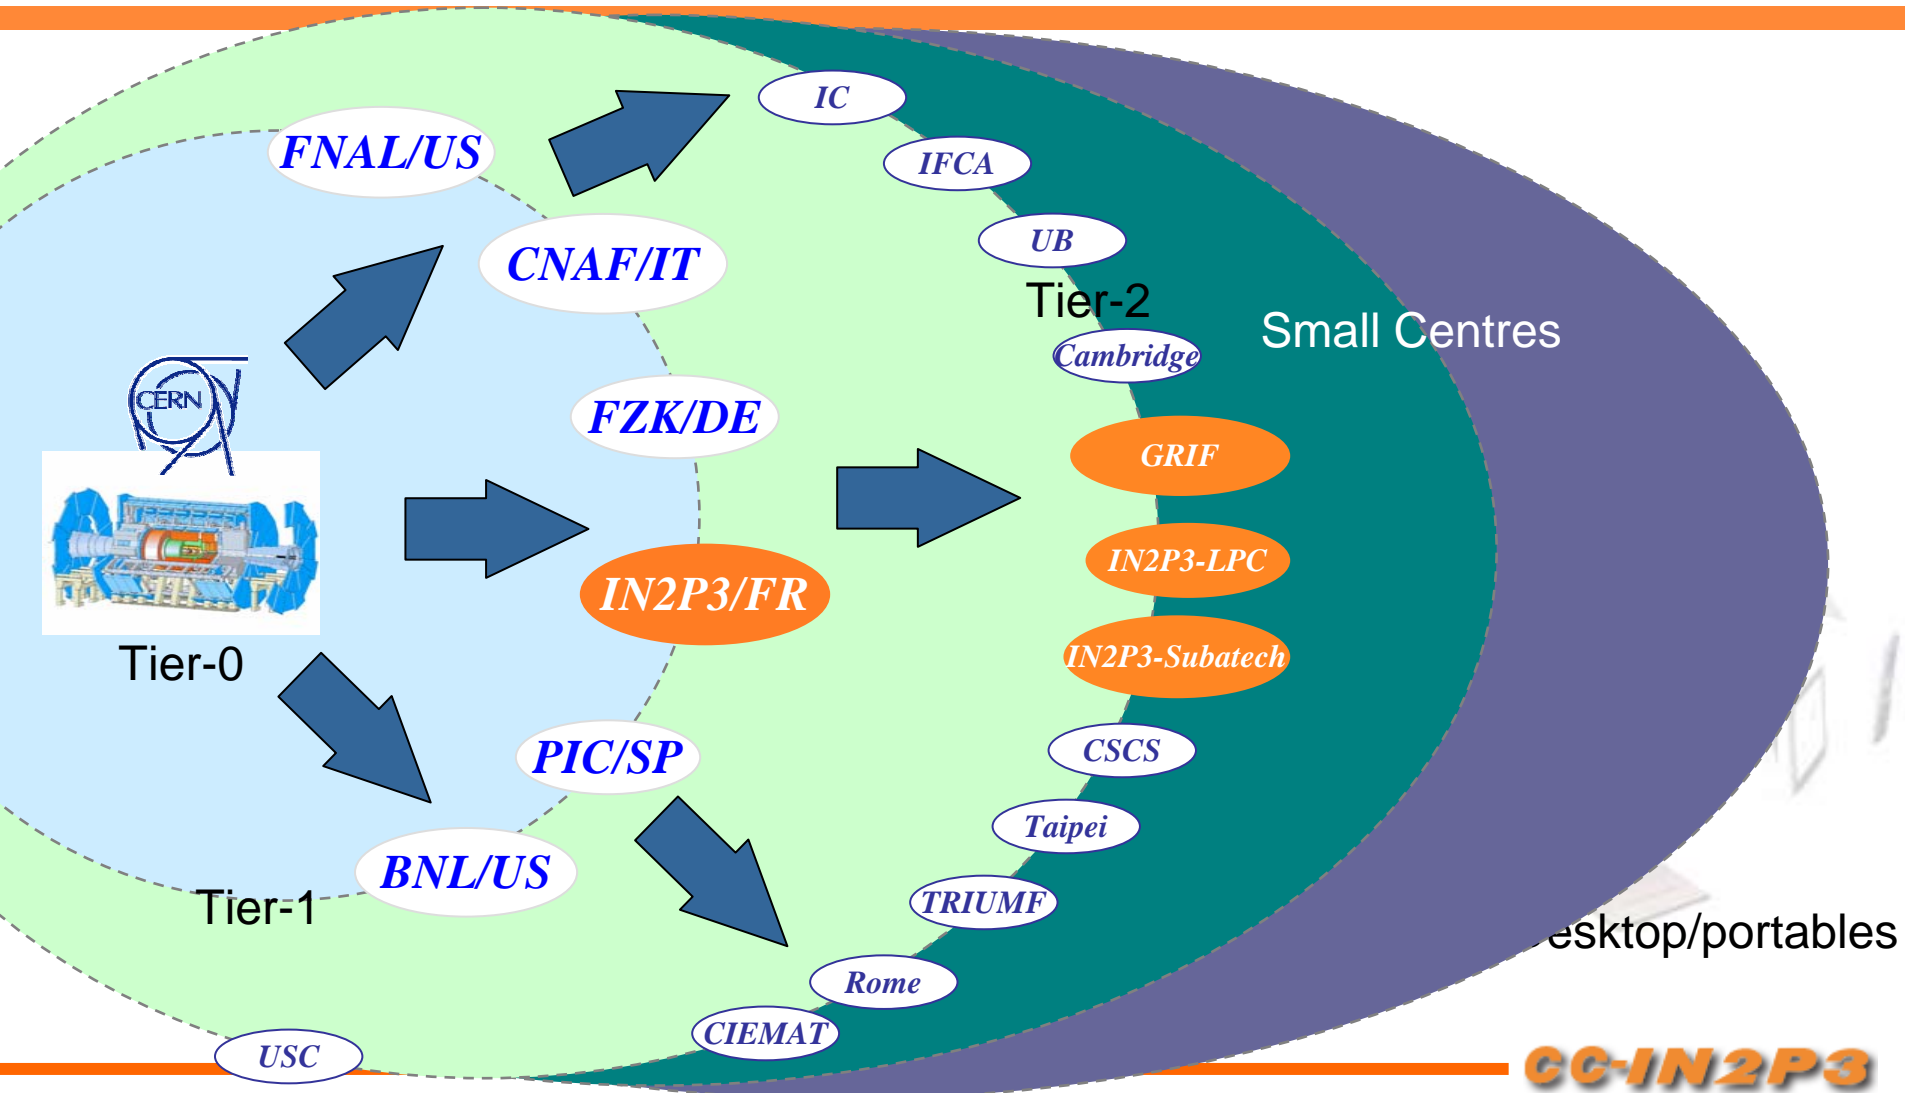

The Large Hadron Collider (LHC)

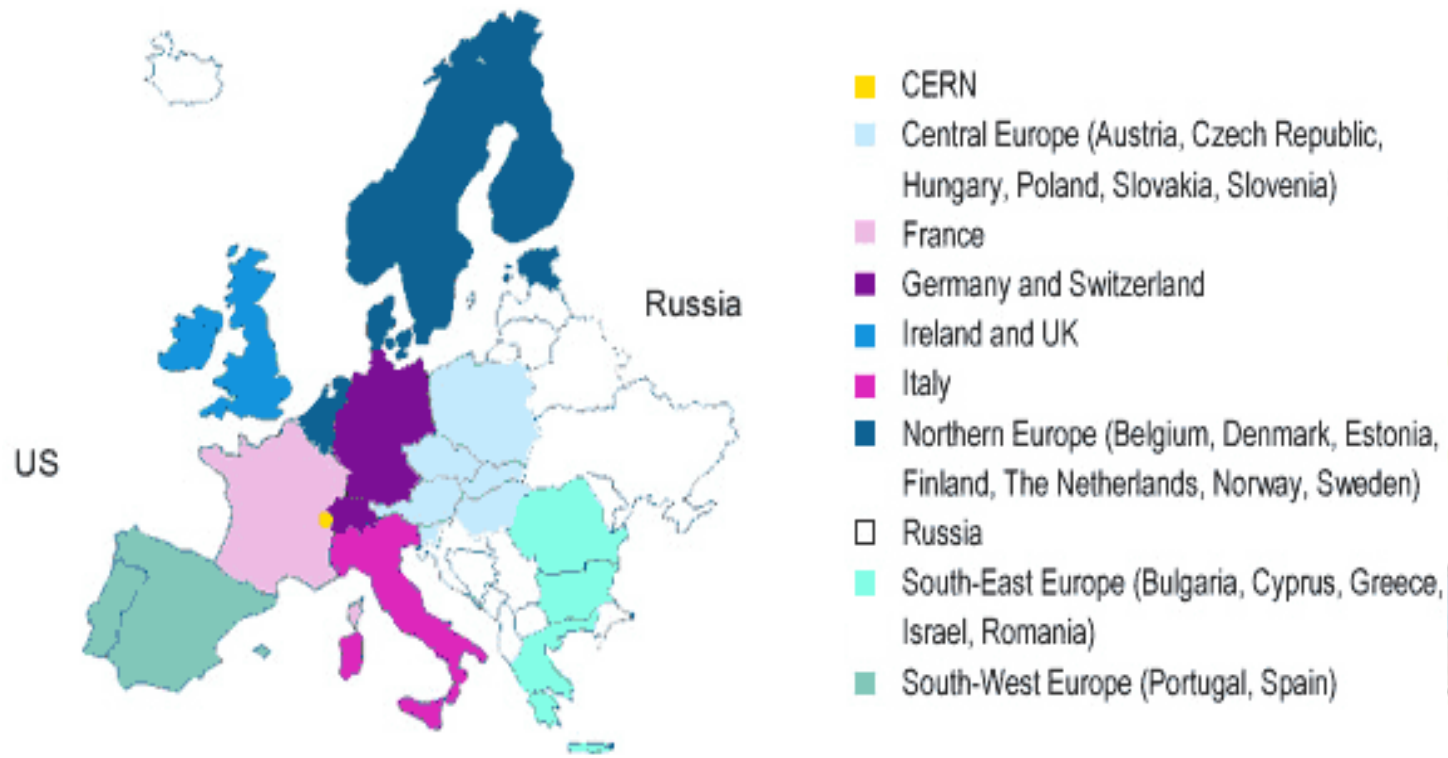

LCG: data distribution model

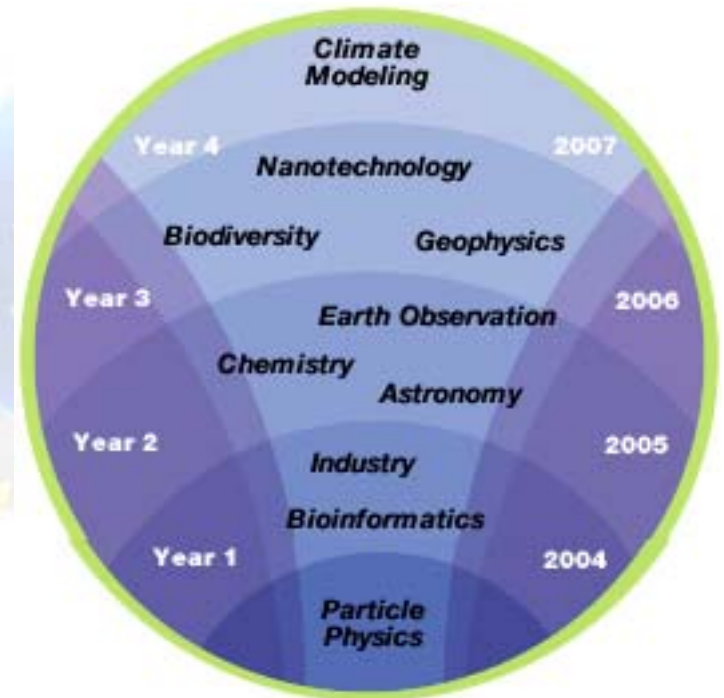

- *Enabling Grids for E-science*
- Goal
 - create a wide European Grid production quality infrastructure on top of present and future EU regional networks infrastructure
 - Provide services on top of this infrastructure 24x7
- **Funded by EU (FP6)**
 - 30 M€
 - 2 years from April 2004 (4 years program)
 - 70 leading institutions in 27 countries, federated in regional grids
- **EGEE-II submitted to European Commission**
 - 2006-2008

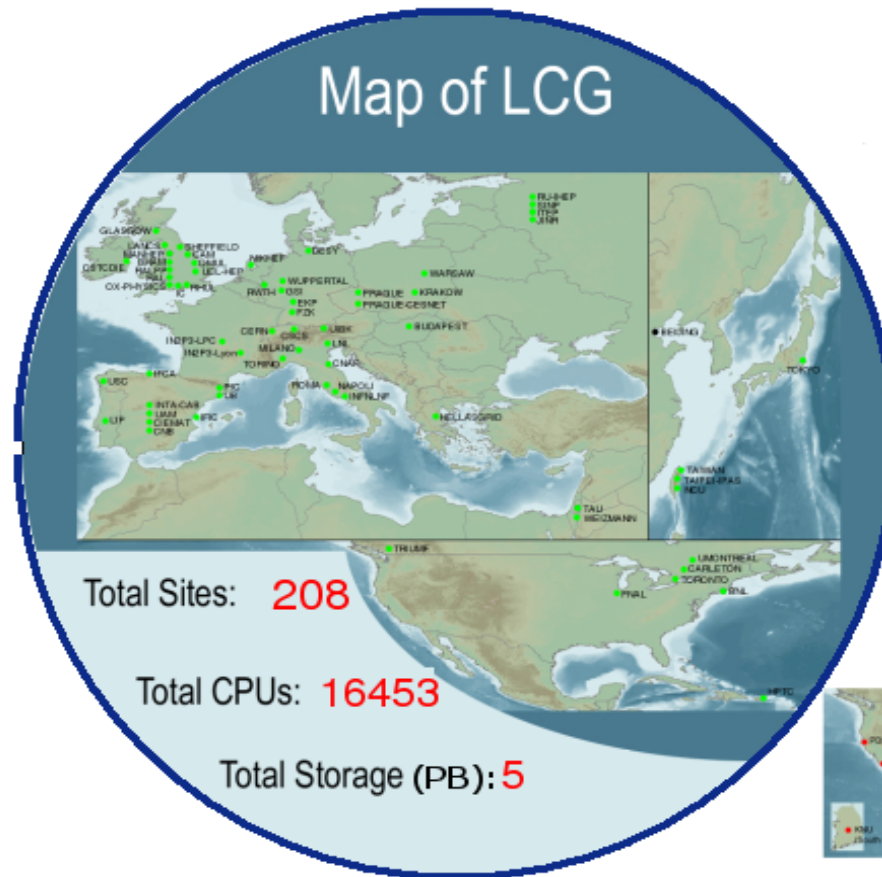

- Partners organized in federations

- Target applications
 - both academic (mainly) and industrial
- Pilot applications
 - Physics and biomedical
 - Selected to guide the implementation and certify the performance and functionality of the evolving infrastructure
- Users
 - 5000 users (3000 at the end of year 2) from at least 5 disciplines

LCG/EGEE status

Collaborating with LCG

NorduGrid

Grid3

Grid Operations

- Characteristics of EGEE/LCG impacting operations
 - Support of many applications of several scientific domains
 - 70+ institutions
 - ◆ 200+ **autonomous** sites
 - ◆ Not dedicated to EGEE/LCG (also providing services to local users)
 - Highly distributed
 - ◆ Federations of sites, sometimes across several countries
 - ◆ Language and local time issues
 - EGEE users will also use other grids (like OSG in the USA)
 - ◆ Interoperability issues

Grid Operations Issues

- Middleware deployment
 - Obtaining information on the resources, sites, services
 - Monitoring grid services
 - Accounting for resource utilization
 - Sharing operation responsibility
 - Supporting end-users and site operators
 - Putting all together
- 

Middleware deployment

- Testing and certifying grid middleware for a highly heterogeneous grid is a difficult task
 - Heterogeneity in hardware, operating system, installation tools at the site-level, resource management systems, etc.
 - A lot of human resources and hardware is required
- Goal
 - Maintain backward compatibility between releases
 - Gently introduce new functionalities/services
 - ◆ provide the means for users to benefit of them
- Balance between the number of releases per year and the time needed to deploy a given release on all sites
 - Several weeks (~8) in the case of LCG
- Well designed information system is fundamental for enabling a grid running several releases of the middleware
- LCG/EGEE: middleware release management and certification is performed at CERN
 - In close cooperation with 3 sites

Obtaining site information

- Keep a central repository of information on the components of the grid
 - Site registry (name, location, contact information, administrator contact, security contact, ...)
 - Site status (candidate, uncertified, production, suspended, ...)
 - History of scheduled unavailability of the site
 - Grid services operated by the site: computing elements, storage elements, file catalogue services, virtual organization management services, resource brokers, etc.
 - Services that sites want to be monitored by the grid operators
- Keeping this information up to date is a shared responsibility between the site operator and the regional operator manager
- LCG/EGEE
 - central repository of site information (a.k.a. Grid Operations Centre) developed and operated by Rutherford Appleton Laboratory (RAL) in the UK
 - <http://goc.grid-support.ac.uk/gridsite/gocdb>
- This repository is used by the grid monitoring services (more on this later)

Monitoring services

- Grid operators need to have a global view of the status of the infrastructure
 - Grid information is highly dynamic
- Tools required to collect information on the grid component state
 - Availability of resources and services, based on the static information stored in the central site repository
 - Collection of metrics on availability of resources and services
 - ◆ e.g. % of downtime, metrics for capacity planning, number of sites in operation, jnumber of jobs submitted/completed/failed, job efficiency per VO/site, etc.
 - ◆ Ways to measure the quality of the service as a whole and of individual services
- **LCG/EGEE**
 - Service of probes sent to every site to check it on a regular basis
 - Service for regularly testing the consistency of the dynamic information published by the site in the grid information system
 - Information on the result of those tests is available to grid operators, site managers and end-users
 - Virtual Organization managers can use this information to select a set of sites they intend to use
 - ◆ VO-specific site/service certification, based on the information provided by the grid operators
 - Monitoring services developed and operated by CERN, Academia Sinica (Taiwan) and GridPP (UK)

Issues: Monitoring Services (cont.)

Accounting

- Tools needed to collect and report information on resource utilization
 - Intended audience: site managers, virtual organization managers, grid operators, funding agencies,...
 - Need to define common ways of measuring resource consumption
 - ◆ Including usage of same units
- **LCG/EGEE**
 - CPU usage information (per user or per VO) provided by each site and stored in a central repository
 - ◆ Reports (charts and numeric data) available through a web interface
 - Next step: collect information on storage utilization
 - Developed and operated by Grid Operations Centre (UK)

Operator on duty

- Global operation of LCG/EGEE is (also) distributed
- Operation model
 - One site has responsibility for the operation of the whole grid by weekly shifts
 - ♦ *Operator-on-duty*
 - Involving at the moment 5 (FR, UK, IT, RU, CERN) out of the 10 existing federations
 - ♦ ~ 20 people
 - ♦ Taiwan is joining from October 2005
- Responsibilities of operator on duty
 - Oversight the health status of the whole infrastructure
 - Diagnose the causes of the sites and services failures
 - ♦ Based on the results of the monitoring services
 - Open operations-related tickets using the problem tracking tool (more on this later)
 - ♦ Perform escalation procedures if needed
- Mechanisms
 - Weekly operations meeting (by phone)
 - Hand-over logs available through the operator-on-duty portal (more on this later)
- Quarterly face-to-face meetings
 - For improving procedures and tracking progress on the on-going development of the operations-oriented tools

Tracking incidents

- Incident tracking model
 - Unique channel for opening tickets
 - Classification and assignment done by the ticket process manager
 - ◆ Each federation has to provide one
 - Tickets are assigned to *support units*
 - One support unit per domain of expertise
 - ◆ Grid operator on duty, virtual organization, regional operations centre, middleware experts, ...
- LCG/EGEE
 - Central incident tracking tool developed and operated by Forschungszentrum Karlsruhe (DE)
 - ◆ <https://gus.fzk.de/>
 - Same tool used by grid operators and end users
 - ◆ e-mail and web interface
 - Sites failing the tests receive an opened ticket
 - ◆ Escalation procedure for solving site-related problems
 - ◆ Involves the regional operator and the site operator
- Interface with ticket handling tools used by sites/federations (if needed)
- Tools for collecting metrics on the responsiveness of support units

Tracking incidents (cont.)

GG-IN2P3

Putting all together: the grid operator portal

- Web portal for integrating all the tools and sources of operations-related information into one single place
 - Main intended audience: the grid operator on duty
 - ◆ But also, virtual organization managers, site managers, regional operator manager, ...
 - Single entry point for relevant operations information
- Developed and operated by CC-IN2P3
 - <http://cic.in2p3.fr/>
 - Provides and maintains an integrated operations dashboard for grid on duty operator
 - ◆ Integrating ticket handling, grid monitoring information, services status, etc.
 - Provides mechanisms for keeping information needed for appropriate hand over between operators on duty
 - Easy access to appropriate contact information on every actor involved in the operations of the grid
 - Provides an effective communication tool for reaching all the relevant actors of the project
 - ◆ Selectively broadcasting information to federations, sites, VO managers, ...
- Other contributions of CC-IN2P3 for the grid operations
 - Actively participates in the development of operators on duty's tools and procedures
 - Chairs the quarterly grid-operators meetings

About this site

Current portal version is 2.5 - released on 27/07/2005

This version is the latest released version, available at <http://cic.in2p3.fr>
Note: No major release planned for the time being. Changes and updates will be regularly put online

View Release Note for Version 2.5: [CICWebSite_release_note_V-2.5.txt](#)

This website has been created as a part of the **SA1 activity**. It is dedicated to ensure:

- [to be a management tool for CIC objectives](#)
- [to be an entry point for all Egee actors for their operational needs](#)
- [to manage the available informations about Egee's VO](#)
- [to monitor and ensure grid day-to-day operations on grid resources and services](#)

Each actor of Egee will then be able to enter or have access to informations from an operational point of view according to its role into Egee - what we define as an actor's view:

- **VO Users**: actions depending upon VO members responsibilities,
- **VO management**: actions depending upon VO Managers and VO administrator,
- **RC staff**: actions depending upon RC responsibilities,
- and so on with **CIC**, **ROC** and **OAG**.

Click [here](#) to have more information about what is CIC and what is its role.

Click [here](#) to have more information about what is **CIC-on-duty**.

Interoperability

- How to cope with operations problems when users simultaneously use cross-grid services?
 - Need to understand what and where the problems are
 - Who is responsible for handling cross-grid incidents?
 - ◆ How to handle cross-grid incidents?
- Grid operators may need to define common procedures (and tools?) for handling operations problems
- Interoperability issues will be addressed in EGEE-II

Future Work

- Achieve a real 24x7 production quality service
- Improve monitoring of core services for reaching target levels for LHC production
 - Will benefit other scientific domains
- Increase diversity in applications and scientific domains
- Integrate other regions
 - Latin-America, south-east Europe, China, Baltic countries, Mediterranean countries...
- Address the grid interoperability issues
